EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patrick D. S. Reed on June 5, 2009.

The application has been amended as follows:

Claim 6: (Currently Amended) A tangible computer-readable data storage medium comprising computer-executable instructions for presenting a merged view of remotely installed applications to which a user has terminal server (TS) based access, the computer-executable instructions comprising instructions for:

sending, by a client computing device, a remote application discovery request to a Remote Application Publishing (RAP) web server;

receiving, by the client computing device, responsive to the request, a discovery response from the RAP web server, the discovery response comprising remote application information aggregated by the RAP web server from multiple sources;

generating, by the client computing device, based on the discovery response, one or more shortcuts to one or more respective applications to which the user has TS based access, wherein the one or more shortcuts are independent application files that

Art Unit: 2443

point to the one or more respective applications to which the user has TS based access, the shortcuts being stored on the client computing device and presented to the user through a user interface (UI) shell executing on the client computing device, each of the applications to which the user has TS based access being installed at one or more installation points in an Intranet, the client computing device being external to the Intranet, wherein a RAP wizard is configured to allow the user to specify the application to be published; and

wherein the one or more shortcuts present a merged view of the applications to which the user has TS based access, the merged view being transparent of whether the applications to which the user has TS based access are managed by different information sources across multiple accessor modules on the Intranet and configured for remote TS-based execution by different ones of multiple installation points.

Claim 11: (Currently Amended) A remote client device comprising:

a processor; and

a memory coupled to the processor, the memory comprising computer-program instructions executable by the processor for presenting a merged view of remotely installed applications to which a user has terminal server (TS) based access, the computer-executable instructions comprising instructions for:

sending, by a client computing device, a remote application discovery request to a Remote Application Publishing (RAP) web server;

receiving, by the client computing device, responsive to the request, a discovery response from the RAP web server, the discovery response comprising remote application information aggregated by the RAP web server from multiple sources;

generating, based on the discovery response, one or more shortcuts to one or more respective applications to which the user has TS based access, wherein the one or more shortcuts are independent application files that point to the one or more respective applications to which the user has TS based access, the shortcuts being stored on the client computing device and presented to the user through a user interface (UI) shell executing on the client computing device, each of the applications being installed at one or more installation points in an Intranet, the remote client device being external to the Intranet, wherein a RAP wizard is configured to allow the user to specify the application to be published; and

wherein the one or more shortcuts present a merged view of the applications to which the user has TS based access, the merged view being transparent of whether the applications to which the user has TS based access are managed by different information sources across multiple accessor modules on the Intranet and configured for remote TS-based execution by different ones of multiple installation points.

This communication warrants no examiner's reason for allowance, as applicant's reply makes evident the reason for allowance, satisfying the record as whole as required by rule 37 CFR 1.104(e). In this case, the substance of applicant's remarks filed on 4/21/2009 with respect to the added claim limitation point out the reason claims are patentable over the prior art of record. Thus, the reason for allowance is in all probability evident from the record and no statement for examiner's reason for allowance is necessary (see MPEP 13202.14).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALINA N. BOUTAH whose telephone number is (571)272-3908. The examiner can normally be reached on Monday-Friday (9:00 am - 5:00 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tonia L.M. Dollinger can be reached on 571-272-4170. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
